Navbar and Carousel with Bootstrap

Navbar

Navbar with Bootstrap

```
<nav class="navbar navbar-expand-lg navbar-dark bg-primary sticky-top">
  <div class="container">
    <a class="navbar-brand" href="#">MySite</a>
    <button class="navbar-toggler" type="button" data-bs-toggle="collapse" data-bs-target="#navbarMenu">
      <span class="navbar-toggler-icon"></span>
    </button>
    <div class="collapse navbar-collapse" id="navbarMenu">
      <ul class="navbar-nav ms-auto">
        <li class="nav-item">
          <a class="nav-link active" href="#">Home</a>
        </li>
        <li class="nav-item">
          <a class="nav-link" href="#">About</a>
        </li>
        <li class="nav-item">
          <a class="nav-link" href="#">Products</a>
        </li>
        <li class="nav-item">
          <a class="nav-link" href="#">Contact</a>
        </li>
      </ul>
    </div>
  </div>
</nav>
```

<nav>

```
<nav class="navbar navbar-expand-lg navbar-dark bg-primary sticky-top">
```

Class	Explanation
navbar	BS class for creating a navbar. Always the parent container.
navbar-expand-lg	Expands the navbar on a large screen, showing all the menu items. Otherwise, will display a hamburger menu
navbar-dark	Makes navbar text and icons suitable for a dark background
sticky-top	Makes the navbar stick to the top

<container> inside <nav>

```
<div class="container">
  <a class="navbar-brand" href="#">MySite</a>
  <button class="navbar-toggler" type="button" data-bs-toggle="collapse" data-bs-
target="#navbarMenu">
    <span class="navbar-toggler-icon"></span>
  </button>
```

Class	Explanation
container	Useful to hold the navbar items. Otherwise, these items might stretch to the edge of the screen
navbar-brand	BS class for styling the logo that is typically part of a navbar
href="#"	The "#" means the homepage
navbar-toggler	BS class for styling the hamburger button
data-bs-toggler	Tells BS to use the "collapse" behaviour, just like in accordion
data-bs-target	Used to link to the component that must open/close when the button is clicked
navbar-toggler-icon	BS class for creating the hamburger icon

Collapsible area

```
<div class="collapse navbar-collapse" id="navbarMenu">
  <ul class="navbar-nav ms-auto">
    <li class="nav-item">
      <a class="nav-link active" href="#">Home</a>
    </li>
```

Class	Explanation
collapse	Tells BS that this part should be collapsible
navbar-collapse	BS class for styling collapsible navbar
navbar-nav	BS class for styling navbar link lists
ms-auto	Adds some margin at the start (left) of the navigation items. Otherwise, the links may appear closer to the navbar brand area, which doesn't look good
nav-item	BS class for wrapping individual navbar item
nav-link	BS class to style individual navbar item
active	Tells BS that the marked link's page is active and, hence, the link should appear different from others

Carousel

Carousel with Bootstrap

```
<div class="container my-5">
  <div id="myCarousel" class="carousel slide shadow-lg overflow-hidden position-relative" data-bs-ride="carousel">
    <div class="carousel-inner">
      <div class="carousel-item active">
        
        <video id="trailerVideo" class="video-overlay position-absolute rounded shadow z-1" muted autoplay loop>
          <source src="https://www.w3schools.com/html/mov_bbb.mp4" type="video/mp4">
          Your browser does not support HTML5 video.
        </video>
      </div>
      <div class="carousel-item">
        
        <video id="trailerVideo" class="video-overlay position-absolute rounded shadow z-1" muted autoplay loop>
          <source src="https://www.w3schools.com/html/mov_bbb.mp4" type="video/mp4">
          Your browser does not support HTML5 video.
        </video>
      </div>
      ...
    </div>
    <button class="carousel-control-prev" type="button" data-bs-target="#myCarousel" data-bs-slide="prev">
      <span class="carousel-control-prev-icon" aria-hidden="true"></span>
      <span class="visually-hidden">Previous</span> </button>

    <button class="carousel-control-next" type="button" data-bs-target="#myCarousel" data-bs-slide="next">
      <span class="carousel-control-next-icon" aria-hidden="true"></span>
      <span class="visually-hidden">Next</span>
    </button> </div> </div>
```

Container and wrapper for the slides

```
<div class="container my-5">  
  <div id="myCarousel" class="carousel slide shadow-lg overflow-hidden position-  
relative" data-bs-ride="carousel">  
    <div class="carousel-inner">
```

Class	Explanation
container	Helps keep the carousel centered and within the browser window
carousel	BS class to style the carousel
slide	BS class to add slide transition to the carousel. Carousel The slide can still change without this class, but the effect does not look nice
position-relative	Needed to position the video in the absolute position.
carousel-inner	It's the wrapper for all the carousel slides

Carousel item

```
<div class="carousel-item active">
  
  <video id="trailerVideo" class="video-overlay position-absolute rounded shadow z-1" muted
autoplay loop> <source src="https://www.w3schools.com/html/mov_bbb.mp4" type="video/mp4">
  Your browser does not support HTML5 video.</video>
</div>
```

Class	Explanation
carousel-item	Every single slide and everything inside it, like the video, caption, must be wrapped in the carousel-item class
active	BS class to make sure that slide is the first one to be displayed
d-block	Makes the image a block element, because it's an inline element by default. Making it block allows us to give it width, height, and margins.
Position-absolute	To position the video exactly where you want it
rounded, shadow	First class is for rounding corners of the video. The second class is for shadow effect
z-1	This is z-index. Values can be from 0 to 3. z-n1 would put an element behind any normal content

Navigation buttons

```
<button class="carousel-control-prev"
  type="button"
  data-bs-target="#myCarousel"
  data-bs-slide="prev">
  <span class="carousel-control-prev-icon"></span>
```

Class	Explanation
carousel-control-prev	For styling the icon for previous button and positioning it to the left. carousel-control-next is used for the next button
prev	BS class to attach an action to the previous button, which will show the previous slide when clicked. The next class is for the opposite.
Carousel-control-prev-icon	BS class to create the arrow for the previous button. Similarly, carousel-control-next-icon is used for the next button.

End
